AMENDMENTS TO THE CLAIMS

1. (Withdrawn) An integrated circuit (IC), including circuitry arranged in an array having a plurality of rows and a plurality of columns, wherein each row of the plurality of rows begins at a first side of the IC and ends at a second side of the IC, and each column of the plurality of columns begins at a third side of the IC and ends at a fourth side of the IC, the IC comprising:

a column of the plurality of columns comprising a plurality of circuit elements of a circuit type substantially occupying the column; and

a row of the plurality of rows positioned at the third side of the IC, wherein a number of circuit elements of an input and output circuit type in the row is less than a number of remaining circuit elements of other circuit types in the row; and

a configuration column comprising configuration logic for configuring the column of the plurality of columns.

- 2. (Withdrawn) The integrated circuit of claim 1 wherein the circuit type is selected from a group consisting of a Configurable Logic Block (CLB) type, a Multi-Giga Bit Transceiver (MGT) type, a Block Random Access Memory (BRAM) type, a Digital Signal Processor (DSP) circuit type, a multiplier circuit type, an arithmetic circuit type, an Input/Output Interconnect (IOI) circuit type, an Input/Output Block (IOB) type, and an application specific circuit type.
- 3. (Withdrawn) The integrated circuit of claim 1 wherein the input and output circuit type is an Input/Output Block (IOB) type, the IOB configured to input or output data signals into or out of the IC.
- 4. (Withdrawn) The integrated circuit of claim 1 wherein the input and output circuit type includes an Input/Output Block type and a Multi-Giga Bit Transceiver type.
- 5. (Withdrawn) The integrated circuit of claim 1 further comprising a center

column comprising configuration logic.

6. (Withdrawn) The integrated circuit of claim 3 wherein the center column is positioned on or near the center axis of the IC.

- 7. (Withdrawn) The integrated circuit of claim 4 further comprising a clock column adjacent to the center column.
- 8. (Withdrawn) The integrated circuit of claim 1 wherein the column of the plurality of columns further comprises a spacer tile and a clock tile.
- 9. (Withdrawn) The integrated circuit of claim 1 further comprising an embedded processor.
- 10. (Previously Presented) An integrated circuit (IC) comprising circuitry having programmable functions and programmable interconnects, the IC further comprising:

a plurality of homogeneous columns and

wherein each of the homogeneous columns starts at one side of the IC and ends at an opposite side of the IC, and

wherein a first column of the plurality of homogeneous columns comprises a first set of substantially identical circuit elements of a first circuit type substantially filling the first column; and

a heterogeneous column having configuration logic and a clock management circuit element.

11. (Original) The integrated circuit of claim 10:

wherein a second column of the plurality of homogeneous columns comprises a second set of substantially identical circuit elements of a second circuit type substantially filling the second column, and

wherein a third column of the plurality of homogeneous columns comprises a third set of substantially identical circuit elements of a third circuit type substantially

filling the third column.

12. (Previously Presented) The integrated circuit of claim 10 wherein the heterogeneous center column further comprises an input/output block.

- 13. (Original) The integrated circuit of claim 10 wherein the first circuit type is selected from a group consisting of a Configurable Logic Block (CLB) type, a Multi-Giga Bit Transceiver (MGT) type, a Block Random Access Memory (BRAM) type, a fixed logic type, an Input/Output Interconnect (IOI) circuit type, and an Input/Output Block (IOB) type.
- 14. (Original) The integrated circuit of claim 13 wherein the fixed logic type comprises a Digital Signal Processor (DSP) circuit type, a multiplier circuit type, an arithmetic circuit type, and an application specific circuit type.
- 15. (Original) The integrated circuit (IC) of claim 10 wherein the integrated circuit further comprises a field programmable gate array (FPGA).
- 16. (Original) The integrated circuit (IC) of claim 10 wherein the integrated circuit further comprises a programmable logic device (PLD).

Claims 17-23 (Cancelled)

24. (Currently Amended) An integrated circuit (IC) comprising:

a heterogeneous center column having configuration logic[[,]] <u>and a clock</u> management circuit element, and an input/output block;

a plurality of columns and

wherein each of the columns starts at one side of the IC and ends at an opposite side of the IC,

wherein a first column of the plurality of columns comprises a first set of substantially identical circuit elements of a first circuit type substantially filling the first

column,

wherein a second column of the plurality of columns comprises a second set of substantially identical circuit elements of a second circuit type substantially filling the second column.

- 25. (Original) The integrated circuit of claim 24 further comprising circuitry having programmable functions and programmable interconnects.
- 26. (Previously Presented) The integrated circuit of claim 25 wherein the first, and second, circuit types have a circuit type selected from a group consisting of a Configurable Logic Block (CLB) type, a Multi-Giga Bit Transceiver (MGT) type, a Block Random Access Memory (BRAM) type, a Digital Signal Processor (DSP) circuit type, a multiplier circuit type, an arithmetic circuit type, an Input/Output Interconnect (IOI) circuit type, an Input/Output Block (IOB) type, and an application specific circuit type.

Claim 27. (Cancelled)

- 28. (Original) The integrated circuit of claim 24 wherein the substantially identical circuit elements are substantially identical tiles.
- 29. (Original) The integrated circuit of claim 28 wherein each tile comprises a functional element coupled to a switch matrix.

Claims 30-34. (Cancelled)

35. (New) An integrated circuit (IC) comprising circuitry having programmable functions and programmable interconnects, the IC further comprising:

a plurality of homogeneous columns and

wherein each of the homogeneous columns starts at one side of the IC and ends at an opposite side of the IC, and

wherein a first column of the plurality of homogeneous columns comprises a set

of substantially identical circuit elements of a first circuit type substantially filling the first column; and

wherein a second column of the plurality of homogeneous columns comprises a set of substantially identical input/output interface circuit elements.

36. (New) The IC of claim 35 wherein the input/output interface circuit elements are configured to allow data to be input or output to or from the IC.
